

Project 2. Life Expectancy in the world in different perspectives

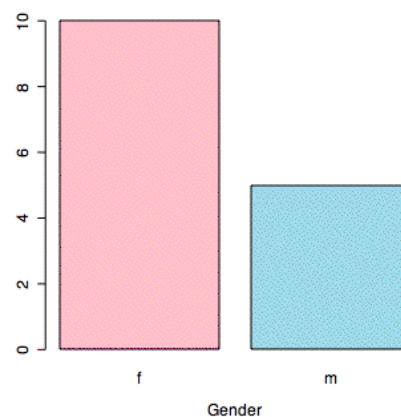

Sketches and Mockups

At the beginning I want to start with world map of Life Expectancy.using World geojson map. I assume it can give a clear illustration the difference of LF between different regions.

On my next visualization, it will be an interactive table with organized by the highest life expectancy and bar chart showing gender difference.

Country	IDI rank change
United Arab Emirates	12
Lebanon	9
Barbados	7
Seychelles	6
Belarus	5
Costa Rica	5
Mongolia	5
Zambia	5

I also want to show how the LE was changing during the years by every country. I think a line chart will help here. And what is the influence of other factors, as an example, GDP (so I can use my vitalization from Project1).
